ENTREPRENUERSHIP DEVELOPMENT CELL

ACADEMIC YEAR 2017-2018

IMPACT ANALYSIS OF 1 DAY ORIENTATION ON ENTREPRENEURSHIP BY T.RAM MOHAN RAO, VASAVI COLLEGE OF ENGINEERING, HYDERABAD on 20.01.2018.

S.NO	STRONGLY AGREE	AGREE	NEUTRAL	DISAGREE	STRONGLY DISAGREE	Weighted Average
1	9	10	1	0	0	4.4
2	6	14	0	0	0	4.3
3	6	10	4	0	0	4.1
4	9	7	4	0	0	4.25
5	11	7	2	0	0	4.45
6	6	12	2	0	0	4.2
7	12	5	3	0	0	4.45

3 High 2 Medium 1 Low

Weighted Average of Each Questions = $\frac{[(\text{Number of people answered Excellent} * 3) + (\text{Number of people answered Good} * 2) + (\text{Number of people answered Good} * 2)]}{\text{Number of students totally answered}}$

REMARKS:

- It was found that the orientation program has good feedback from the participants for all the questions with all the value averaging above 4.

One day workshop for non-teaching staff on “**Power Cables Selection, Testing, Laying and Commissioning**”

Report

Department:

Electrical and Electronics Engineering

Academic Year:

2016 - 2017

Event Date:

Monday, February 6, 2017.

Event Category:

Training programme for non-teaching staff

Event Venue:

N-Block

Target Audience:

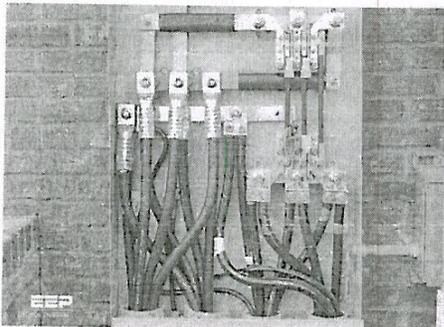

Non-teaching staff of EEE dept.

Number of Audience: 4

Event Report:

Dr. Moinuddin, Professor, Nallamalla Reddy Engineering college, Hyderabad, delivered a lecture on Power Cables Selection, Testing, Laying and Commissioning. Cable selection and application.

It is essential to know cable construction, characteristics, and ratings to understand problems related to cable systems. However, to correctly select a cable system and assure its satisfactory operation, additional knowledge is required. This knowledge may consist of service conditions, type of load served, mode of operation and maintenance, and the like.

The process of connecting neutral of the system to the earth through a GI wire is known as Neutral earthing or System earthing. It is used in star winding systems including generator, transformer, etc.

Equipment Earthing

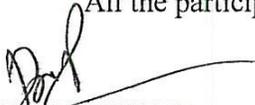

When the metallic frame of the equipment is connected to the earth by the help of a conducting wire then it is called Equipment earthing. In fault condition in the apparatus, the fault current flows to the earth and the system is protected.

Need of Earthing

Earthing is needed for the following reasons –

- To protect the user from electrical shock.
- Earthing system shows the easiest path to the fault current even after the insulation failure.
- It protects the electrical apparatus used in the circuit from short circuit current, high voltage surges and lightning discharges.

All the participants are Enlightened and learned many more concepts practically.

National Level Faculty Development Program
on

Efficiency Improvement in Distribution, Operation and Maintenance of
Distribution Transformers

Report

Dr.P.Sridevi, Professor of EEE department (GVIET) delivered a lecture on Efficiency Improvement in Distribution, Operation and Maintenance of Distribution.

Electric power is the basic infrastructure for economic development of any developing country like India. In Indian power system, phenomenal expansion has taken place since last five decades. For example, generation capacity has grown at an average rate of 9% and reached to a level of more than 100,000 MW as of today. The development of transmission network has also closely followed the growth of generation facilities. With a meager transmission network, with 132kV as the highest transmission voltage at the time of independence, today, besides HVDC lines, we have 765kV as the highest transmission voltage level, five regional grids under operation and formation of a National Grid interconnecting all the regional grids is under progress. In the sub-transmission and distribution sector also, substantial expansion has taken place and State Electricity Boards (SEBs), more or less, have been able to fulfill the objectives of Government in terms of expanding the electricity network to rural areas. Out of total 587,258 inhabited villages in the country as per 1991 census, more than 86% villages have been electrified. 13 states have declared 100% electrification of feasible villages. However, despite impressive growth, the presently available subtransmission and distribution network is not adequate to deliver the power to the ultimate consumers with reliability and up to their satisfaction. In fact, distribution is the weakest link in Indian power system chain and its expansion did not, for the past many years, keep pace with generating capacity expansion. It is mainly due to low investment in this sector and poor financial health of various SEBs

Due to above reasons coupled with mushrooming/unplanned growth of the network, Indian distribution system is characterized by inefficiency that results into to high losses (technical and commercial), frequent interruptions and poor voltages in the power supply and dissatisfaction to the consumers. It is estimated that out of total energy generated, approximately 55% is billed and only 41% is realized. Further, the gap between average revenue realization and average cost of supply has been increasing constantly. During the year 2000-01, the average cost of supply from SEBs was 304 paise per unit while the average revenue realization was 212 paise per unit. Therefore, to accelerate the overall growth of Indian power system and the economy as a whole, efficient functioning of distribution system both in technical and financial terms is the need of the hour. In this paper, important factors responsible for making the existing distribution sector inefficient are discussed. A few aspects for improvement of efficiency in the distribution system in terms of quality power supply

PRINCIPAL
Vidya Jyothi Institute of Technology
Himayatnagar (Vill), C B. Post,
Hyderabad-75.

to the consumers, financial turnaround of SEBs etc. are also deliberated with specific reference to Sindhudurg distribution circle in Maharashtra State.

– Difficulties in augmentation/maintenance of system. For example, re-conductoring of the line, replacement of rusted pole etc. for which shut down of a section of the line need to be taken which would affect the power supply to the remaining feeding areas. • Difficulties in voltage regulation: As per the guidelines, sub-transmission and distribution voltage need to be regulated within ± 10 to $\pm 6\%$ depending upon the voltage level. However, during peak times, due to huge power flows over long radial link, substantial voltage drop beyond permissible limits occurs. On the contrary, during off-peak times (when demand reduces), shunt capacitors used for load compensation remain connected in the network and thus leads to higher voltages. • Inadequacy in system: Due to non-systematic planning for growth of the network without considering long-term requirement, many parts of the sub-transmission and distribution network are loaded heavily without adequate redundancies. This inadequacy causes frequent tripping as well as high technical losses. • Development of long LT lines: Distribution network all over the country uncharacteristically have mesh of long low voltage (LT) lines with inadequate transformer capacity. This leads to substantial voltage drop, high technical losses, unreliability in supply etc. • Absence of proper energy accounting system/audit: This makes actual estimation of losses and ratio of technical and commercial losses difficult, thus high loss areas, specific elements etc. remain unidentified. • Poor quality of equipment and lack of proper maintenance, accounts for the high level of technical losses at the distribution stage. Further, improper load management and inadequate reactive compensation at load points also lead to high losses. In addition to above, distribution system is also suffering from high level of commercial losses due to poor billing, revenue collection etc. and theft of power by various users. These constitute a large component of overall losses. There are also losses on account of defective/slow energy meters, burnt meters, no meters etc. In fact, energy loss in EHV transmission system is only around 4-5%, whereas, about 40- 45% of the total energy loss takes place in sub-transmission and distribution system. This is the most crucial area as the cost of energy at the distribution stage is about Rs. 2.75 per unit – the most value added stage in the entire power sector. Further, the rise in industrial and agricultural pumping loads increased the reactive power requirements. Adequate attention has not been given to compensate this reactive demand, which resulted in poor voltage conditions and increased losses. The huge losses are the major drain on the revenue stream deteriorating the financial health of SEBs thus retarding the growth. Therefore, attentions need to be paid to make the distribution system financially viable through improvement of distribution system efficiency. It can be achieved only through reduction in losses, improvement in revenue collections, improved customer satisfaction etc.

REPORT ON FACULTY DEVELOPMENT PROGRAMME

Recent Trends in Engineering Materials & Nano Technology

Summary Report: An inspiring and stimulating keynote address was given by Dr. B.V.Reddy, Professor in VJIT Hyderabad on “Engineering Materials & Nano technologies for Aerospace”. He covered the topics like Introduction to Nano Science & Nano technology, Methods to create super-hydrophobic surfaces, Corrosion & wear resistant coatings. The lecture was really informative and Participants were enlightened with the most widely used advances in Nanotechnology.

Report on

One day training program on FRDM kits

26th August 2017

One day training program on FRDM kits was organized by ECE department for Non-teaching staff on 23/08/2017. 6 Non-teaching staff has successfully participated in the workshop.

The speaker of the session was S.Ritesh, Assistant professor, VJIT, Hyderabad. He started the session with basic concepts of embedded system design, with particular emphasis on hands-on and demonstration sessions on system design using ARM microcontrollers. Keeping in view of the recent developments, this course will be based on state-of-the-art microcontroller boards and programming environments. This course will also help the participants to understand the basic concepts of FRDM kit and its programming.

Second session continued with hands on training experience board FRDM KL25Z. Participants have gained knowledge on how to interface external devices such as LED's, Accelerometer, Motors, Capacitive touch sensor, DAC and ADC, also programming mbed compiler.

It is highly recommended that the participants procure some of the low cost microcontroller development boards and actually carry out the experiments that would be demonstrated. Session ended with vote of thanks.

Report on “ Personality Development and Communication Skills”

(Held on 28th October 2017)

Resource Person

Mr. Md. Zaheer Ahmed, Assistant Professor
CSE Department, VJIT

The workshop focused on listening skills, time management, goal setting and team work.

The main objective of the Workshop was to familiarize participants with the emerging ideas and trends on how to develop personality in the 21st century contexts. The programme also aimed to teach participants to work with various professionals, people and groups to understand the meaning of life and work in the present context; to enhance their communication skills and interpersonal skills in order to function in professional and social settings effectively; to enrich the academic language skills for academic writing and presentations; to understand effective planning, time management and implementation for setting goals and achieving both personal and professional goals; to learn to evaluate oneself (self appraisal and introspection) for further growth, personally and professionally.

The topics covered in the session are “Understanding oneself: personality”, “Thinking Skills & Critical Pedagogy”, “Communication skills and interpersonal skills” and “Academic language (English) skills”, “Understanding Personality” and “Communication Skills”, “Gender Sensitization: An Important Soft Skill for Personality Development”.
