MATHEMATICS-I (MATRICES AND CALCULUS)

Department of Humanities & Sciences				I B. Tech I Semester			
Course Code	Hours/Week			Credits	Marks		
A251002	L	T	P	C	CIE	SEE	Total
	3	1	0	4	40	60	100

Objectives: To learn

1. Concept of a rank of the matrix and applying this concept to know the consistency and solving the system of linear equations.
2. Concept of eigen values and eigen vectors and to reduce the quadratic form to canonical form
3. Geometrical approach to the mean value theorems and their application to the mathematical problems and also to discuss the curve tracing process.
4. Finding maxima and minima of functions of two and three variables.
5. Evaluation of multiple integrals and their applications.

Course outcomes: After learning the contents of this paper, the student must be able to

1. Formulate the matrix representation of a given set of linear equations and analyze the solution of the system using appropriate methods.
2. Compute the eigenvalues and determine the corresponding eigenvectors of a given matrix. Transform a quadratic form into its canonical form using orthogonal transformations.
3. Apply the mean value theorems to solve real-world and mathematical problems also to discuss the curve tracing process.
4. Determine the extreme values of functions of two variables with and without constraints.
5. Evaluate multiple integrals and apply them to calculate areas and volumes.

UNIT-I: Matrices

8 L

Rank of a matrix by Echelon form and Normal form — Inverse of Non-singular matrices by Gauss-Jordan method. System of linear equations: Solving system of Homogeneous and Non-Homogeneous equations.

UNIT-II: Eigen values and Eigen vectors

10 L

Linear Transformation and Orthogonal Transformation: Eigen values — Eigen vectors and their properties — Diagonalization of a matrix — Cayley-Hamilton Theorem (without proof) — Finding inverse and power of a matrix by Cayley-Hamilton Theorem. Quadratic forms and Nature of the Quadratic Forms — Reduction of Quadratic form to canonical form by Orthogonal Transformation.

UNIT-III: Single Variable Calculus 10 L

Limit and Continuous of functions and its properties. Mean value theorems: Rolle's theorem — Lagrange's Mean value theorem with their Geometrical Interpretation and applications — Cauchy's Mean value Theorem — Taylor's Series (All the theorems without proof).

Curve Tracing: Curve tracing in Cartesian coordinates.

UNIT-IV: Multivariable Calculus (Partial Differentiation and applications) 10 L

Definitions of Limit and continuity — Partial Differentiation: Total derivative — Jacobian — Functional dependence & independence. Applications: Maxima and minima of functions of two variables and three variables using method of Lagrange multipliers.

UNIT-V: Multivariable Calculus (Integration) 10 L

Evaluation of Double Integrals (Cartesian and polar coordinates) — change of order of integration (only Cartesian form) — Change of variables for double integrals (Cartesian to polar). Evaluation of Triple Integrals — Change of variables for triple integrals (Cartesian to Spherical and Cylindrical polar coordinates).

TEXT BOOKS:

1. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 36th Edition, 2010.
2. R.K. Jain and S.R.K. Iyengar, Advanced Engineering Mathematics, Narosa Publications, 5th Editon, 2016.

REFERENCE BOOKS:

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Wiley & Sons, 2006.
2. G.B. Thomas and R.L. Finney, Calculus and Analytic geometry, 9th Edition, Pearson, Reprint, 2002.
3. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2008.
4. H. K. Dass and Er. Rajnish Verma, Higher Engineering Mathematics, S Chand and Company Limited, New Delhi.

ADVANCED ENGINEERING PHYSICS

Department of Humanities & Sciences				I B. Tech I Semester			
Course Code	Hours/Week			Credits	Marks		
A251003	L	T	P	C	CIE	SEE	Total
	3	0	0	3	40	60	100

Course Objectives:

1. To study crystal structures and material characterization techniques like XRD.
2. To learn the various wave optics techniques, phenomena and applications.
3. To understand fundamental concepts of quantum mechanics and their applications in solids.
4. To introduce quantum computing principles, quantum gates, and basic quantum measurements.
5. To explore the working and applications of lasers and fibre optics in modern technology.

Course Outcomes:

1. Analyze crystal structures and apply XRD technique or material characterization.
2. Classify various wave optics techniques and explain their phenomena and applications.
3. Apply quantum mechanical principles to explain particle behaviour and discrete energy levels in materials.
4. Understand quantum computing concepts, use quantum gates, and explain basic quantum measurements.
5. Explain the principles of lasers and fibre optics and their applications in various communications.

UNIT-I: Crystallography & Materials Characterization

[09Hrs]

Introduction: Unit cell, Space lattice, Basis, Lattice parameters; Crystal structures, Bravais lattices, Atomic radius, Number of atoms per unit cell, Coordination number, Distance of nearest neighbourhood, packing factor of Simple cubic (SC), Body Centered Cubic (BCC), Face Centered Cubic (FCC) structure; Miller indices, Inter-planar distance. Concept of Nanomaterials: Surface area to Volume ratio, X -ray diffraction: Bragg's law, Powder method, Calculation of average crystallite size using Debye Scherrer formula.

UNIT-II: Wave Optics

[09 Hrs]

Principle of superposition, Coherence, Interference - Interference in thin films by reflection, Newton's rings. Diffraction – Fresnel and Fraunhofer diffraction, Fraunhofer diffraction due to single slit, Plane diffraction grating, Resolving power of grating (qualitative treatment), Polarization – Polarization of light waves, Plane of vibration, Plane of polarization, Double refraction, Nicol's Prism, Applications of polarization.

UNIT-III: Quantum Mechanics

[09Hrs]

Introduction: de-Broglie hypothesis, Heisenberg uncertainty principle, Postulates of quantum mechanics: Operators in quantum mechanics, Eigen values and Eigen functions, Expectation value, Physical significance of wave function, Schrödinger's time independent wave equation, Application of Schrödinger's time independent wave equation for a particle in a 1-D box: Expression for solution of wave function and derivation for Eigen energy states, Band Theory of solids, Classification of solids based on Band theory.

UNIT-IV: Quantum Computing**[09Hrs]**

Introduction to Quantum Computing, Mathematical Tools: Linear Algebra Basics, Tensor Product, Dirac Notation (Bra-Ket) and Properties, Hilbert Space, Bloch Sphere, Superposition, Classical Bits vs Quantum Bits (Qubits), Multiple Qubit Systems and Entanglement, Quantum Evolution and Measurements. Quantum Gates: Hadamard Gate, CNOT, Pauli-X gate, Swap Gate and Quantum Circuits. Future of Quantum Computing.

UNIT-V: Laser and Fiber Optics**[09Hrs]**

Introduction to interaction of radiation with matter: Absorption, Spontaneous emission and Stimulated emission, Einstein coefficients and their relations, Characteristics of a laser, Population inversion, Components of a laser: active medium, pumping source, optical resonator, Construction and working of Ruby laser, He-Ne laser, Applications of lasers.

Introduction to Optical Fibers: Total internal reflection, Construction of optical fiber, Acceptance angle and Numerical aperture, Classification of optical fibers (step and graded index fibers), Block diagram of optical fiber communication system, Applications of optical fibers.

TEXT BOOKS:

1. Engineering Physics, Rajendran; McGraw Hill Education.
2. Engineering Physics by B K Pandey and S Chaturvedi; CENGAGE Learning.
3. Introduction to Classical and Quantum Computing, by Thomas G. Wong; Rooted Grove.

REFERENCE BOOKS:

1. Quantum computing: A Gentle Introduction by Rieffel and Polak; The MIT Press.
2. Introduction to Solid State Physics, Charles Kittel, John Wiley & Sons, Inc.
3. Optics, Ajoy K. Ghatak, McGraw Hill Education India.

C PROGRAMMING AND DATA STRUCTURES

Department of Humanities & Sciences				I B. Tech I Semester			
Course Code	Hours/Week			Credits	Marks		
A251502	L	T	P	C	CIE	SEE	Total
	3	0	0	3	40	60	100

Course Outcomes:

At the end of the course, student will be able to:

1. Understand the various steps in Program Development.
2. Explore the basic concepts in C Programming Language.
3. Develop modular and readable C Programs
4. Implement user-defined data types with structures, unions, and file handling techniques to manage data efficiently.
5. Apply basic data structures such as linked lists, stacks, queues and implement sorting and searching algorithms for problem solving.

UNIT-I

Introduction to Computers: Computer Systems, Computing Environments, Computer Languages, Creating and running programs.

Introduction to C Language: Background, Simple programs, Identifiers, Keywords, Basic data types, Variables, Constants, Standard Input / Output statements.

Structure of a C Program: Operators and types, Expressions, Precedence and Associativity, Expression Evaluation, Type conversions.

UNIT-II

Conditional Statements: if and switch statements.

Repetition statements: while, for, do-while statements, Loop examples, other statements related to looping - break, continue, go to.

Arrays - Concepts, using arrays in C, two-dimensional arrays, multidimensional arrays.

UNIT-III

Designing Structured Programs: Functions - basics, user defined functions, standard functions, Recursion.

Pointers: Introduction, pointers to pointers, Memory allocation functions.

Strings: Concepts, C Strings, String Input / Output functions, arrays of strings, string manipulation functions.

UNIT-IV

Derived types - The Typedef, enumerated types, Structures - Declaration, definition and initialization of structures, accessing structures, operations on structures, Self Referential Structures. Difference between Union and Structure.

File Input and Output: Text Vs Binary streams, standard library functions for files, File programs - copy, merge files.

UNIT-V

Data Structures: Introduction to Data Structures, abstract data types, Linear list - singly linked list implementation, insertion, deletion and searching operations on linear list.

Stacks: Operations, stack implementation using array, list of stack applications.

Queues: operations, Queue implementation using array.

Sorting: Selection sort, bubble sort, insertion sort.

Searching: linear and binary search methods.

TEXT BOOKS:

1. C Programming & Data Structures, B.A.Forouzan and R.F.Gilberg, Third Edition, Cengage Learning.
2. Problem Solving and Program Design in C, J.R. Hanly and E.B. Koffman, Fifth Edition, Pearson Education.
3. The C Programming Language, B.W. Kernighan and Dennis M. Ritchie, PHI/Pearson Education.

REFERENCE BOOKS:

1. C & Data structures - P. Padmanabham, 3rd Edition, B.S. Publications.
2. C Programming with problem solving, J.A. Jones & K. Harrow, Dreamtech Press.
3. Programming in C - Stephen G. Kochan, III Edition, Pearson Education.
4. C for Engineers and Scientists, H. Cheng, McGraw-Hill International Edition.
5. Data Structures using C - A.M. Tanenbaum, Y. Langsam and M.J. Augenstein, Pearson Education / PHI
6. C Programming & Data Structures, E. Balagurusamy, TMH.
7. C Programming & Data Structures, P. Dey, M Ghosh R Thereja, Oxford University Press.
8. C & Data structures - E V Prasad and N V Venkateswarlu, S Chand & Co.

ENGINEERING MECHANICS

Department of Humanities & Sciences				I B. Tech I Semester			
Course Code	Hours/Week			Credits	Marks		
A251301	L	T	P	C	CIE	SEE	Total
	3	0	0	3	40	60	100

Course Outcomes: At the end of the course, students will be able to

1. Determine resultant of forces acting on a body and analyze equilibrium of a body subjected to a system of forces.
2. Solve problem of bodies subjected to friction and determine the centroid and centre of gravity of the composite sections
3. Compute moment of inertia of various sections.
4. Analyze the kinematics and dynamics of a body undergoing rectilinear and curvilinear motion.
5. Apply work energy equations for translation, fixed axis rotation and plane motion.

Unit-I: Introduction to Engineering Mechanics

Force Systems: Basic concepts, Rigid Body equilibrium, System of Forces, Parallelogram law, Coplanar Concurrent Forces, Components of forces in Space, Resultant, Moment of Forces and its Application. Couples and Resultant of Force system.

Equilibrium of Force Systems: Equilibrium of Force Systems, Free body diagrams, Equations of Equilibrium of Coplanar Systems.

Unit-II: Friction and Centre of Gravity

Friction: Types of friction, Limiting friction, Laws of Friction, Static and Dynamic Friction. Motion of bodies, Ladder friction, Wedge Friction and Screw jack.

Centroid and Centre of Gravity: Centroid of Lines, Areas and Volumes from first principle, centroid of composite sections, Centre of Gravity and its implications, Theorem of Pappus.

Unit-III: Moment of Inertia

Area Moment of Inertia: Definition, Area Moment of Inertia, Moment of inertia of Plane sections from first principles, Theorems of moment of inertia, Moment of inertia of standard sections and composite sections.

Mass Moment of Inertia: Moment of Inertia of Masses, Transfer Formula for Mass Moments of Inertia, Mass moment of inertia of composite bodies.

Unit-IV: Kinematics and Dynamics of Particles

Introduction, Types of Motion: Translational, rotational, and general plane motion, rectilinear motion, Curvilinear motion: rectangular and polar coordinates, Projectiles, Relative and Constrained Motion, Instantaneous Centre of Rotation in plane motion

Newton's Laws of Motion, Application in rectangular, path, and polar coordinates, Differential equations of rectilinear and curvilinear motions, D'Alembert's Principle, Dynamic equilibrium, Applications in rectilinear, curvilinear, and plane motion of connected bodies

Unit-V: Work-Energy Principle

Work-Energy Principle applied to particle motion and connected systems, Conservation of energy and power calculations, Applications to systems with constraints and fixed-axis rotation

Impulse and Momentum: Linear and angular impulse-momentum principles, Conservation laws and elastic impact (direct and oblique), Coefficient of restitution and kinetic energy loss

TEXT BOOKS:

1. Singer's Engineering Mechanics–Statics and Dynamics, Reddy Vijay Kumar K. and J. Suresh Kumar. B.S Publications, 3rd Edition, Rpt. 2024.
2. Engineering Mechanics, Shames and Rao, Pearson Education, 1st Edition, 2005.

REFERENCE BOOKS:

1. Timoshenko S.P. and Young D.H. "Engineering Mechanics", Tata McGraw Hill International edition, 2017
2. Engineering Mechanics, Hibbeler R.C & Ashok Gupta, Pearson, 10th Edition, 2010.
3. Engineering Mechanics, Dumir P.C, Sengupta and Srinivas, Universities Press, 1st Edition, 2020.
4. Engineering Mechanics, Basudeb Bhattacharyya, Oxford University Press, 2nd Edition, 2014.

ENGINEERING WORKSHOP

Department of Humanities & Sciences				I B. Tech I Semester			
Course Code	Hours/Week			Credits	Marks		
A251381	L	T	P	C	CIE	SEE	Total
	0	0	2	1	40	60	100

Course Outcomes: At the end of the course, the student will be able to:

1. Understanding the tools and methods of using to fabricate Engineering Components.
2. Applying the methods to read and interpret work shop drawings.
3. Evaluating various methods and trades of workshop in the component building.

1. TRADESFOREXERCISES:

At least two exercises from each trade:

- I. Carpentry: T-Lap Joint, Dovetail Joint, Mortise and Tenon Joint
- II. Fitting: V-Fit, Dovetail Fit and Semi-circular fit
- III. Tin Smithy: Square Tin, Rectangular Tray and Conical Funnel
- IV. Foundry: Preparation of Green S and Mould using Single Piece and Split Pattern
- V. Welding Practice: Arc Welding and Gas Welding
- VI. House wiring: Parallel and Series, Two-way Switch and Tube Light
- VII. Lathe: Facing and Step Turning

2. TRADESFORDEMONSTRATIONANDEXPOSURE:

Plumbing, Machine Shop, Power tools in construction and Wood Working

TEXTBOOKS:

1. Elements of Workshop Technology, Hajra Choudhury S. K., Hajra Choudhury A. K. and Nirjhar Roy S.K., Vol.I 2008andVol.II2010, Media promoters and publishers private limited, Mumbai.
2. Workshop Practice Manual, K. Venkata Reddy, BS Publication,6th Edition, Rpt.2025.

REFERENCE BOOKS:

1. Workshop Manual, K. Venugopal, Anuradha Publications,2012th edition,2012

BASIC ELECTRICAL ENGINEERING

Department of Humanities & Sciences				I B. Tech I Semester			
Course Code	Hours/Week			Credits	Marks		
A251201	L	T	P	C	CIE	SEE	Total
	3	0	0	3	40	60	100

Course Objectives:

1. To understand DC and Single & Three phase AC circuits
2. To study and understand the different types of DC, AC machines and Transformers.
3. To impart the knowledge of various electrical installations and the concept of power, power factor and its improvement.

Course Outcomes: At the end of the course, students will be the able to

1. Explain basic principles of electrical elements.
2. Apply the concepts of AC circuits to various elements and combinations.
3. Examine principle and tests of transformer.
4. Contrast the working of DC machines and induction motors.
5. Assess working principle of AC generator and electrical installations.

UNIT-I:

D.C. Circuits: Electrical circuit elements (R, L and C), voltage and current sources, KVL&KCL, analysis of simple circuits with dc excitation. Superposition, Thevenin's and Norton's Theorems – simple problems.

UNIT-II:

A.C. Circuits: Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor, Analysis of single-phase series ac circuits consisting of R, L, C, RL, RC, RLC combinations – simple problems, resonance in series R-L-C circuit. Three-phase balanced circuits, voltage and current relations in star and delta connections.

UNIT-III:

Transformers: Construction and working of Single-Phase Transformer, Ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Working Principle and applications of Auto-transformer.

UNIT-IV:

Electrical Machines: Construction of DC Machine, working principle of DC Motor, performance characteristics of DC Shunt motor. Construction and working of a Three-phase induction motor – Torque – Speed Characteristics, Construction and working of Single-phase induction motor, Construction and working of Three Phase Alternator – No Load Characteristics.

UNIT-V:

Electrical Installations: Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, battery backup.

TEXT BOOKS:

1. D.P. Kothari and I. J. Nagrath, “Basic Electrical Engineering”, Tata McGraw Hill, 4th Edition, 2019.
2. MS Naidu and S Kamakshaiyah, “Basic Electrical Engineering”, Tata McGraw Hill, 2nd Edition, 2008.

REFERENCE BOOKS:

1. P. Ramana, M. Suryakalavathi, G.T. Chandrasheker, “Basic Electrical Engineering”, S. Chand, 2nd Edition, 2019.
2. D. C. Kulshreshtha, “Basic Electrical Engineering”, McGraw Hill, 2009
M. S. Sukhija, T. K. Nagsarkar, “Basic Electrical and Electronics Engineering”, Oxford, 1st Edition,

ADVANCED ENGINEERING PHYSICS LAB

Department of Humanities & Sciences				I B. Tech I Semester			
Course Code	Hours/Week			Credits	Marks		
A251082	L	T	P	C	CIE	SEE	Total
	0	0	2	1	40	60	100

Course Objectives:

1. To enable students to determine fundamental physical constants and material parameters using modern physics experiments.
2. To provide practical exposure to optical phenomena such as interference, diffraction, and dispersion using precision instruments.
3. To develop skills in the characterization of semiconductor devices including LEDs, photodiodes, and solar cells.
4. To impart knowledge and hands-on experience with laser-based measurements.
5. To familiarize students with optical fiber parameters and loss measurements, and strengthen skills in data analysis, interpretation, and reporting.

Course Outcomes: By the end of the course, the student will be able to:

1. Determine fundamental constants such as Planck's constant and the energy gap of a semiconductor.
2. Analyze the optical phenomena including interference, diffraction, and dispersion through experimental study.
3. Evaluate the electrical and optical characteristics of semiconductor devices such as LEDs, photodiodes, and solar cells.
4. Demonstrate working knowledge of lasers through wavelength determination using single-slit and diffraction grating methods.
5. Determine the numerical aperture and bending losses of optical fibers, and apply scientific methods for accurate data collection and reporting.

List of Experiments:

1. Determination of work function and Planck's constant using the photoelectric effect.
2. Determination of the energy gap of a semiconductor.
3. Determination of the radius of curvature of a plano-convex lens by forming Newton's rings.
4. Determination of the wavelength of a given monochromatic light source using a plane diffraction grating.
5. Determination of the dispersive power of a given prism.
6. Determination of the operating point for maximum efficiency of a given LED.
7. Determination of the operating point of a photodiode under varying illumination levels.
8. Determination of the optimum load for maximum power output of a given solar cell.
9. (a) Determination of the wavelength of a laser using a single slit.
(b) Determination of the wavelength of a laser using a diffraction grating (N-slits).
10. (a) Determination of the numerical aperture of a given optical fiber.
(b) Determination of the bending losses in a given optical fiber.

Note: Any 8 experiments are to be performed.

TEXTBOOKS:

1. Laboratory Manual of Engineering Physics, Aparna and K. Venkateswara Rao, V.G.S. Publishers.

C- PROGRAMMING AND DATA STRUCTURES LAB

Department of Humanities & Sciences				I B. Tech I Semester			
Course Code	Hours/Week			Credits	Marks		
A251582	L	T	P	C	CIE	SEE	Total
	0	0	2	1	40	60	100

Course Outcomes: At the end of the course, student will be able to:

1. Develop modular and readable C Programs.
2. Solve problems using strings, functions.
3. Handle data in files.
4. Implement stacks, queues using arrays, linked lists.
5. Understand and analyze various searching and sorting algorithms.

List of Experiments

1. Write a C program to find the sum of individual digits of a positive integer.
2. Fibonacci sequence is defined as follows: the first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a C program to generate the first n terms of the sequence.
3. Write a C program to generate all the prime numbers between 1 and n, where n is a value supplied by the user.
4. Write a C program to find the roots of a quadratic equation.
5. Write a C program to find the factorial of a given integer.
6. Write a C program to find the GCD (greatest common divisor) of two given integers.
7. Write a C program, which takes two integer operands and one operator from the user, performs the operation and then prints the result. (Consider the operators +, -, *, /, % and use Switch Statement)
8. Write a C program to find both the largest and smallest numbers in a list of integers.
9. Write a C program that uses functions to perform the following:
 - i) Addition of Two Matrices
 - ii) Multiplication of Two Matrices
10. Write a C program that uses functions to perform the following operations:
 - i) To insert a sub-string into a given main string from a given position.
 - ii) To delete n characters from a given position in a given string.
11. Write a C program to determine if the given string is a palindrome or not.
12. Write a C program that displays the position or index in the string where the string 'T' begins, or -1 if 'T' doesn't contain 'T'.
13. Write a C program to count the lines, words and characters in a given text.
14. Write a C program to generate Pascal's triangle.
15. Write a C program to construct a pyramid of numbers.
16. Write a C program that uses functions to perform the following operations:
 - i) Reading a complex number
 - ii) Writing a complex number
 - iii) Addition of two complex numbers
 - iv) Multiplication of two complex numbers
 (Note: represent complex numbers using a structure.)
17. i. Write a C program which copies one file to another.

- ii. Write a C program to reverse the first n characters in a file.
(Note: The file name and n are specified on the command line.)
18. i. Write a C program to display the contents of a file.
ii. Write a C program to merge two files into a third file
(i.e., the contents of the first file followed by those of the second are put in the third file).
19. Write a C program that uses functions to perform the following operations on a singly linked list:
i) Creation ii) Insertion iii) Deletion iv) Traversal
20. Write a C program that implements a stack (its operations) using Arrays
21. Write a C program that implements a Queue (its operations) using Arrays
22. Write a C program that implements the following sorting methods to sort a given list of integers in ascending order:
i) Bubble sort ii) Selection sort iii) Insertion sort
23. Write a C program that uses both recursive and non-recursive functions to perform the following searching operations for a Key value in a given list of integers:
i) Linear search ii) Binary search

TEXT BOOKS:

1. C Programming & Data Structures, B.A. Forouzan and R. F. Gilberg, Third Edition, Cengage Learning.
2. Let us C, Yeswanth Kanitkar
3. C Programming, Bala Guruswamy.

BASIC ELECTRICAL ENGINEERING LAB

Department of Humanities & Sciences				I B. Tech I Semester			
Course Code	Hours/Week			Credits	Marks		
A251281	L	T	P	C	CIE	SEE	Total
	0	0	2	1	40	60	100

Course Objectives:

1. To measure the electrical parameters for different types of DC and AC circuits using conventional and theorems approach.
2. To study the transient response of various R, L and C circuits using different excitations.
3. To determine the performance of different types of DC, AC machines and Transformers.

Course Outcomes: At the end of the course, students will be the able to

1. Explain basic principles of electrical elements.
2. Apply the concepts of AC circuits to various elements and combinations.
3. Examine principle and tests of transformer.
4. Contrast the working of DC machines and induction motors.
5. Assess working principle of AC generator and electrical installations.

Any Ten experiments should be conducted

1. Verification of Ohm's Law
2. Verification of KVL and KCL
3. Verification of Superposition theorem.
4. Verification of Thevenin's theorem
5. Verification of Norton's theorem
6. Calculations and Verification of Impedance and Current of RL and RC series circuits
7. Transient Response of Series RL and RC Circuits for DC Excitation.
8. Measurement of Voltage, Current and Real Power in primary and Secondary Circuits of a Single-Phase Transformer
9. Load Test on Single Phase Transformer (Calculate Efficiency and Regulation)
10. Performance Characteristics of a DC Shunt Motor
11. Torque-Speed Characteristics of a Three-phase Induction Motor.
12. No-Load Characteristics of a Three-phase Alternator

TEXT BOOKS:

1. D.P. Kothari and I. J. Nagrath, "Basic Electrical Engineering", Tata McGraw Hill, 4th Edition, 2019.
2. MS Naidu and S Kamakshiah, "Basic Electrical Engineering", Tata McGraw Hill, 2nd Edition, 2008.

REFERENCE BOOKS:

1. P. Ramana, M. Suryakalavathi, G.T.Chandrasheker,"Basic Electrical Engineering", S. Chand, 2nd Edition, 2019.
2. D. C. Kulshreshtha, "Basic Electrical Engineering", McGraw Hill, 2009
3. M. S. Sukhija, T. K. Nagsarkar, "Basic Electrical and Electronics Engineering", Oxford, 1st Edition, 2012.

MATHEMATICS II (ORDINARY DIFFERENTIAL EQUATIONS AND VECTOR CALCULUS)

Department of Humanities & Sciences				I B. Tech II Semester			
Course Code	Hours/Week			Credits	Marks		
A252002	L	T	P	C	CIE	SEE	Total
	3	0	0	3	40	60	100

Course Objectives: To learn

1. Methods of solving the differential equations of first and higher order.
2. Concept, properties of Laplace transforms.
3. Solving ordinary differential equations using Laplace transforms techniques.
4. The physical quantities involved in engineering field related to vector valued functions
5. The basic properties of vector valued functions and their applications to line, surface and volume integrals

Course outcomes: After learning the contents of this paper, the student must be able to

1. Apply the concept of first order differential equations to solve real world problems
2. Solve higher differential equation and apply the concept of differential equation to real world problems.
3. Use the Laplace Transforms techniques for solving Ordinary Differential Equations.
4. Apply the concepts of vector differentiation to compute gradient, divergence, and curl, and interpret their physical significance in engineering problems.
5. Evaluate line, surface, and volume integrals, and apply vector integration theorems such as Green's, Gauss's, and Stokes's to solve engineering problems.

UNIT-I: First Order Ordinary Differential Equations

Exact differential equations – Equations reducible to exact differential equations – linear and Bernoulli's equations – Orthogonal Trajectories (only in Cartesian Coordinates). Applications: Newton's law of cooling – Law of natural growth and decay.

UNIT-II: Ordinary Differential Equations of Higher Order

Higher order linear differential equations with constant coefficients: Non-Homogeneous terms of the type e^{ax} , $\sin ax$, $\cos ax$, polynomials in x , $e^{ax}V(x)$ and $x V(x)$ – Method of variation of parameters.

UNIT-III: Laplace Transforms

Laplace Transforms: Laplace Transform of standard functions – First and second shifting theorems – Laplace transforms of functions multiplied by 't' and divided by 't' – Laplace transforms of derivatives and integrals of function – Evaluation of integrals by Laplace transforms – Laplace transform of periodic functions – Inverse Laplace transform by different methods, convolution theorem (without proof). Applications: solving Initial value problems by Laplace Transform method.

UNIT-IV: Vector Differentiation

Vector point functions and scalar point functions — Gradient — Directional derivatives — Divergence — Solenoidal Vector — Curl — Irrotational vectors – Vector Identities.

UNIT-V: Vector Integration

Line, Surface and Volume Integrals. Theorems of Green, Gauss and Stokes (without proofs) and their applications

TEXT BOOKS:

1. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 36th Edition, 2010.
2. R.K. Jain and S.R.K. Iyengar, Advanced Engineering Mathematics, Narosa Publications, 5th Edition, 2016.

REFERENCE BOOKS:

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Wiley & Sons, 2006.
2. G.B. Thomas and R.L. Finney, Calculus and Analytic geometry, 9th Edition, Pearson, Reprint, 2002.
3. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2008.
4. H. K. Dass and Er. Rajnish Verma, Higher Engineering Mathematics, S Chand and Company Limited, New Delhi.

ENGINEERING CHEMISTRY

Department of Humanities & Sciences				I B. Tech II Semester			
Course Code	Hours/Week			Credits	Marks		
A252004	L	T	P	C	CIE	SEE	Total
	3	0	0	3	40	60	100

Course Objectives:

1. To understand the industrial significance of water treatment, fundamental principles of battery chemistry, and the impact of corrosion along with its control methods for structural protection.
2. To impart foundational knowledge of various energy sources and their practical applications in engineering.
3. To equip students with an understanding of biosensors, and analytical techniques applicable in engineering, industrial, environmental, and biomedical fields.

Course Outcomes:

1. **Identify** and **explain** the fundamental properties of water and its applications in domestic and industrial systems.
2. **Describe** the principles of electrochemical processes and **demonstrate** basic methods of corrosion prevention.
3. **Explain** the working of batteries and energy sources and **analyze** their relevance in engineering and entrepreneurial applications.
4. **Define** and **classify** polymers and other engineering materials based on their structure, properties, and applications.
5. **Apply** the principles of material properties and **analyze** analytical techniques for engineering and environmental problem-solving.

UNIT-I: Water and its treatment:

[8]

Introduction- Hardness, types, degree of hardness and units. Estimation of hardness of water by complexometric method - Numerical problems. Potable water and its specifications (WHO) - Steps involved in the treatment of potable water - Disinfection of potable water by chlorination and breakpoint chlorination. Defluoridation - Nalgonda technique. Boiler troubles: Scales, Sludges and Caustic embrittlement. Internal treatment of boiler feed water - Calgon conditioning, Phosphate conditioning, Colloidal conditioning. External treatment methods - Softening of water by ion- exchange processes. Desalination of brackish water – Reverse osmosis.

UNIT-II: Electrochemistry and Corrosion:

[8]

Introduction- Electrode potential, standard electrode potential, Nernst equation (no derivation), electrochemical cell - Galvanic cell, cell representation, EMF of cell - Numerical problems. Types of electrodes, reference electrodes - Primary reference electrode - Standard Hydrogen Electrode (SHE), Secondary reference electrode - Calomel electrode. Construction, working and determination of pH of unknown solution using SHE, Quinhydrone electrode and Calomel electrode.

Corrosion: Introduction- Definition, causes and effects of corrosion – Theories of corrosion, chemical and electrochemical theories of corrosion, Types of corrosion: galvanic, water-line and pitting corrosion. Factors affecting rate of corrosion - Nature of the metal (Position of metal in galvanic series, Purity of metal, Nature of corrosion product), Nature of the corroding environment (Temperature, Humidity, and pH). Corrosion control methods - Cathodic protection Methods - Sacrificial anode and impressed current methods.

UNIT-III: Energy sources:**[8]**

Batteries: Introduction – Classification of batteries - Primary, secondary and reserve batteries with examples. Construction, working and applications of Zn-air and Lithium-ion battery. Fuel Cells – Differences between a battery and a fuel cell, Construction and applications of Direct Methanol Fuel Cell (DMFC).

Fuels: Introduction, classification and characteristics of a good fuel, Calorific value – Units - HCV, LCV- Dulong's formula - Numerical problems.

Fossil fuels: Introduction, Petroleum - Refining of Crude oil, Cracking - Types of cracking - Moving bed catalytic cracking. LPG and CNG composition and uses.

Synthetic Fuels: Fischer-Tropsch process, Introduction and applications of Hythane and Green Hydrogen.

UNIT - IV: Polymers:**[8]**

Definition - Classification of polymers: Based on origin and tacticity with examples – Types of polymerization - Addition (free radical addition mechanism) and condensation polymerization. Plastics, Elastomers and Fibers: Definition, preparation, properties and applications of PVC, Buna-S, Nylon-6,6. Differences between thermoplastics and thermo setting plastics, Fiber reinforced plastics (FRP).

Conducting polymers: Definition and Classification with examples - Mechanism of conduction in transpoly-acetylene and applications of conducting polymers.

Biodegradable polymers: Polylactic acid and its applications.

UNIT-V- Engineering Materials:**[8]**

Lubricants: Definition and Characteristics of a good lubricant- thin film mechanism of lubrication, properties of lubricants- viscosity, cloud and pour point, flash and fire point.

Biosensor - Definition, Classification, Amperometric Glucose monitor sensor.

Interpretative spectroscopic applications of UV-Visible spectroscopy for Analysis of pollutants in dye industry, IR spectroscopy in night vision-security, Pollution Under Control- CO sensor (Passive Infrared detection),

TEXT BOOKS:

1. Engineering Chemistry by P.C. Jain and M. Jain, Dhanpatrai Publishing Company, 2010.
2. Engineering Chemistry by Rama Devi, Dr. P. Aparna and Rath, Cengage learning, 2025.

PYTHON PROGRAMMING

Department of Humanities & Sciences				I B. Tech II Semester			
Course Code	Hours/Week			Credits	Marks		
A252503	L	T	P	C	CIE	SEE	Total
	3	0	0	3	40	60	100

Course Outcomes:

At the end of the course, student will be able to:

1. Write Python programs using variables, operators, expressions and control structures.
2. Implement Python programs using built-in data structures like lists, tuples, sets, and dictionaries.
3. Apply modular and object-oriented programming principles in Python.
4. Handle files, exceptions, and apply Python libraries for problem-solving.
5. Develop small-scale applications in Python for automation and data manipulation.

UNIT-I Introduction to Python and Basics of Programming

Introduction to Python: Features, Applications, Installation, IDEs, Python Syntax, Indentation, Comments, Variables, Data Types, Type Casting.

Operators: Arithmetic, Relational, Logical, Assignment, Membership, Identity, Bitwise. **Input/Output functions:** input(), print().

Control Structures: if, if-else, if-elif-else, Nested Conditions.

Looping: for, while, Nested Loops, break, continue, pass.

UNIT-II Data Structures in Python

Strings: Creation, Indexing, Slicing, Methods, String Formatting.

Lists: Creation, Indexing, Slicing, List Comprehension, Methods.

Tuples: Properties, Indexing, Methods.

Sets: Creation, Operations, Methods.

Dictionaries: Creation, Access, Methods, Dictionary Comprehension, Iterating over data structures.

UNIT-III Functions and Modules

Functions: Defining, Calling, Parameters, Return Values, Types of Arguments – Positional, Keyword, Default, Variable Length, Scope of Variables – Local and Global, Lambda Functions, Map, Filter, Reduce, Recursion.

Modules and Packages: Importing, Creating User-defined Modules, Standard Modules (math, random, datetime), Packages in Python.

UNIT-IV File Handling and Exception Handling

File Handling: Opening, Reading, Writing, Appending, File Modes, File Methods, Working with CSV and JSON Files.

Exception Handling: try, except, else, finally, Built-in Exceptions, Raising Exceptions. Introduction to Regular Expressions (re module).

UNIT-V Object-Oriented Programming and Applications

OOP Basics: Classes, Objects, Attributes, Methods, Constructor (**init**), self keyword. **Inheritance:** Single, Multiple, Multilevel, Hierarchical, Method Overriding, Method Overloading (conceptual), Encapsulation and Polymorphism.

Application Development: Data Processing Script, Basic Calculator, File Organizer, Simple Data Analysis with pandas.

TEXTBOOKS:

1. Python Programming: Using Problem Solving Approach by Reema Thareja.
2. Python Crash Course by Eric Matthes, Learning Python by Mark Lutz.

REFERENCE BOOKS:

1. Introduction to Python Programming by Gowrishankar S., Veena A.
2. Python Cookbook by David Beazley and Brian K. Jones.
3. Fluent Python by Luciano Ramalho, Automate the Boring Stuff with Python by Al Sweigart.

ENGLISH FOR SKILL ENHANCEMENT

Department of Humanities & Sciences				I B. Tech II Semester			
Course Code	Hours/Week			Credits	Marks		
A252001	L	T	P	C	CIE	SEE	Total
	3	0	0	3	40	60	100

Course Objectives: This course will enable the students to:

1. Improve their vocabulary.
2. Use appropriate sentence structures in their oral and written communication.
3. Develop their reading and study skills.
4. Equip students to write paragraphs, essays, précis and draft letters.
5. Acquire skills for Technical report writing.

Course Outcomes: Students will be able to:

1. Choose appropriate vocabulary in their oral and written communication.
2. Demonstrate their understanding of the rules of functional grammar and sentence structures.
3. Develop comprehension skills from known and unknown passages.
4. Write paragraphs, essays, précis and draft letters.
5. Write abstracts and reports in various contexts.

UNIT –I

Theme : Perspectives

Lesson on ‘The Generation Gap’ by Benjamin M. Spock from the prescribed textbook titled *English for the Young in the Digital World* published by Orient Black Swan Pvt. Ltd

Vocabulary : The Concept of Word Formation-The Use of Prefixes and Suffixes-Words Often Misspelt - Synonyms and Antonyms

Grammar : Identifying Common Errors in Writing with Reference to Parts of Speech particularly Articles and Prepositions—Degrees of Comparison

Reading : Reading and Its Importance-Sub Skills of Reading—Skimming and Scanning.

Writing : Sentence Structures and Types -Use of Phrases and Clauses in Sentences- Importance of Proper Punctuation-Techniques for Writing Precisely—Nature and Style of Formal Writing.

UNIT–II

Theme : Digital Transformation

Lesson on ‘Emerging Technologies’ from the prescribed textbook titled *English for the Young in the Digital World* published by Orient Black Swan Pvt. Ltd.

Vocabulary : Homophones, Homonyms and Homographs

Grammar : Identifying Common Errors in Writing with Reference to Noun-pronoun Agreement and Subject-verb Agreement.

Reading : Reading Strategies-Guessing Meaning from Context Identifying Main Ideas – Exercises for Practice

Writing : Paragraph Writing—Types, Structures and Features of a Paragraph - Creating Coherence—Linkers and Connectives - Organizing Principles in a Paragraph—Defining- Describing People, Objects, Places and Events—Classifying- Providing Examples or Evidence - Essay Writing - Writing Introduction and Conclusion.

UNIT-III

Theme : **Attitude and Gratitude**

Poems on ‘Leisure’ by William Henry Davies and ‘Be Thankful’ Unknown Author from the prescribed textbook titled *English for the Young in the Digital World* published by Orient Black Swan Pvt. Ltd.

Vocabulary : Words Often Confused-Words from Foreign Languages and their Use in English.

Grammar : Identifying Common Errors in Writing with Reference to Misplaced Modifiers and Tenses.

Reading : Sub-Skills of Reading – Identifying Topic Sentence and Providing Supporting Ideas - Exercises for Practice.

Writing : Format of a Formal Letter-Writing Formal Letters E.g. Letter of Complaint, Letter of Requisition, Job Application with CV/ Resume–Difference between Writing a Letter and an Email - Email Etiquette.

UNIT-IV

Theme : **Entrepreneurship**

Lesson on ‘Why a Start-Up Needs to Find its Customers First ’by Pranav Jain from the prescribed text book titled *English for the Young in the Digital World* published by Orient Black Swan Pvt. Ltd.

Vocabulary : Standard Abbreviations in English–Inferring Meanings of Words through Context– Phrasal Verbs–Idioms.

Grammar : Redundancies and Clichés in Written Communication – Converting Passive to Active Voice and Vice-Versa.

Reading : Prompt Engineering Techniques–Comprehending and Generating Appropriate Prompts - Exercises for Practice

Writing : Writing Practices-Note Making-Précis Writing.

UNIT-V

Theme : **Integrity and Professionalism**

Lesson on ‘Professional Ethics’ from the prescribed textbook titled *English for the Young in the Digital World* published by Orient Black Swan Pvt. Ltd.

Vocabulary: Technical Vocabulary and their Usage–One Word Substitutes–Collocations.

Grammar : Direct and Indirect Speech-Common Errors in English (Covering all the other aspects of grammar which were not covered in the previous units)

Reading : Survey, Question, Read, Recite and Review (SQ3R Method) – Inferring the Meaning and Evaluating a Text-Exercises for Practice

Writing : Report writing-Technical Reports-Introduction–Characteristics of Report –

Categories of Reports Formats- Structure of Reports (Manuscript Format)-

Types of Reports- Writing a Technical Report.

TEXTBOOKS:

1. Board of Editors.2025. *English for the Young in the Digital World*. Orient Black Swan Pvt.Ltd.

REFERENCE BOOKS:

BUILDING PLANNING AND CONSTRUCTION

Department of Humanities & Sciences				I B. Tech II Semester			
Course Code	Hours/Week			Credits	Marks		
A252101	L	T	P	C	CIE	SEE	Total
	3	0	0	3	40	60	100

Course Objectives: This course is expected to enable the student to:

1. Provide fundamental knowledge about buildings and the influence of climate, orientation, and landscaping on building planning and design.
2. Impart understanding of planning principles and familiarize students with the National Building Code (NBC), its structure and guidelines for residential buildings.
3. Identify and explain the various types of foundations, their functions, and requirements for different types of buildings and soil conditions.
4. Develop knowledge of key building components.
5. Introduce various finishing works and temporary structures.

Course Outcomes: Upon completion of this course, student should be able to

1. Understand the classification of buildings, criteria for site selection, the impact of climate on building design, and the role of orientation and landscaping in planning.
2. Apply the principles of planning and interpret building bye-laws to design functionally efficient, economical, and regulation-compliant buildings.
3. Interpret the importance of effective site preparation and Identify, explain the different types of shallow foundations.
4. Identify and analyze various types of floors, roofs, staircases, doors, windows, and used in building construction.
5. Demonstrate knowledge of finishing works such as plastering, pointing, and floor finishes, and explain the types of scaffolding, formwork, and centering.

UNIT - I

Fundamentals of Buildings: Building, Classification of buildings, Site selection for Residential buildings, Climate and its influence on building planning; Elements of Climate, Climatic Zone of India, Climate and comfort, Earth and its motion, Directions and their characteristics, Landscaping.

Orientation of buildings; orientation, Factors affecting orientation, Sun, Wind, Rain, CBRT suggestions orientation criteria for Indian conditions.

UNIT - II

Principles of planning and Bye Laws of buildings: Aspects, prospect, Privacy, Furniture Requirements, Roominess, Grouping, Circulation, Elegance, Economy, Practical consideration.

Buildings bye Laws; Introduction, Objective, Principles, Applicability of building bye Laws. Introduction to National building code, Objectives, Scope, Structure of NBC. General Building Requirements, Guidelines for Residential Buildings. Building Heights, Setbacks, FAR/FSI. Open Spaces, room sizes, Lighting and Ventilation, Means of Access and service ducts. Classification of buildings for fire safety.

UNIT - III

Introduction to building construction and site preparation; components of Building, **Foundations: Functions & Requirements, Types of Shallow Foundations:** isolated footings, combined footings, strap footings, wall footings, raft foundations, **Types of Deep Foundations:** driven piles (timber, precast concrete, steel), bored cast-in-situ piles. Brick masonry – types – bonds; Stone masonry – types

UNIT - IV**Floors, Roofs, Stairs, Doors, Windows:**

Types of floors – Ground and upper floors – Brick flooring, Cement concrete flooring, Stone flooring, Tiled flooring. Types of roofs – Flat, Pitched, Sloped, Curved roofs Components. Classification of staircases – Straight flight, Dog-legged, Open well, Spiral staircases – Types of doors – Panelled, Flush. Glass, PVC, Aluminum, Steel, Sliding, Revolving, Collapsible, and Rolling shutter doors – Door frame materials and fittings. Types of windows

UNIT - V**Finishing Works:**

Plastering – Purpose, types, tools and techniques – Defects in plastering. Pointing – Types and application areas – Differences between plastering and pointing.

Scaffolding, Formwork, and Centering:

Scaffolding – Definition, purpose, components – Types: Single, Double, Cantilever, Suspended, Trestle, Steel and patented scaffolds – Safety considerations. Formwork – Functions, materials (timber, steel, aluminum, plastic), formwork for slabs, beams, columns, and walls – Centering

TEXT BOOKS:

1. B.C. Punmia, Ashok Kumar Jain, and Arun Kumar Jain, *Building Construction*, Laxmi Publications, 11th Edition, 2022.
2. Kumara Swamy N. and Kaneswaran Rao A., *Building Planning and Drawing*, Charotar Publishing House, Revised Edition, 2020.
3. S.S. Bhavikatti, *Building Materials and Construction*, Vikas Publishing House, 4th Edition, 2020.

REFERENCE BOOKS:

ENGINEERING DRAWING AND COMPUTER AIDED DRAFTING

Department of Humanities & Sciences				I B. Tech II Semester			
Course Code	Hours/Week			Credits	Marks		
A252302	L	T	P	C	CIE	SEE	Total
	2	0	2	3	40	60	100

Course Out comes: At the end of the course, the student will be able to:

1. Understand and apply the fundamental principles of engineering graphics.
2. Apply orthographic projections to points, lines, and planes using conventional and computer-aided methods.
3. Analyze projections and sectional views of regular solids using conventional and computer-aided methods.
4. Develop surfaces of basic solids like prism, cylinder, pyramid, and cone.
5. Create isometric projections and convert between isometric and orthographic views.

UNIT-I: Introduction to Engineering Graphics (Conventional)

Principles of Engineering Graphics and their Significance, Geometrical Constructions, Scales, Plain and Diagonal, Conic Sections including the Rectangular Hyperbola, General method only. Cycloid, Epicycloid and Hypocycloid.

UNIT-II: Orthographic Projections (Conventional and Computer Aided)

Principles of Orthographic Projections, Conventions, Projections of Points and Lines, Projections of Plane regular geometric figures. Auxiliary Planes. Computer aided orthographic projections, points, lines and planes. Introduction to Computer aided drafting, views, commands and conics.

UNIT-III: Projections of Regular Solids (Conventional and Computer Aided)

Auxiliary Views, Sections or Sectional views of Right Regular Solids, Prism, Cylinder, Pyramid, Cone, Auxiliary views, Computer aided projections of solids, sectional views.

UNIT-IV: Development of Surfaces (Conventional)

Prism, Cylinder, Pyramid and Cone.

UNIT-V: Isometric Projections (Conventional and Computer Aided)

Principles of Isometric Projection, Isometric Scale, Isometric Views, Conventions, Isometric Views of Lines, Plane Figures, Simple and Compound Solids, Isometric Projection of objects having non, isometric lines. Isometric Projection of Spherical Parts. Conversion of Isometric Views to Orthographic Views and Vice- versa, Conventions. Conversion of orthographic projection into isometric view.

TEXTBOOKS:

1. Engineering Drawing, N.D. Bhatt, Charotar, 54th Edition, 2023.
2. Engineering Drawing and graphics Using AutoCAD, T. Jeyapoovan and Vikas, S. Chand and company Ltd., 3rd Edition, 2010.

REFERENCE BOOKS:

1. Engineering Drawing, Basant Agrawal and C.M. Agrawal, McGraw Hill, 3rd Edition, 2019.

ENGINEERING CHEMISTRY LAB

Department of Humanities & Sciences				I B. Tech II Semester			
Course Code	Hours/Week			Credits	Marks		
A252083	L	T	P	C	CIE	SEE	Total
	0	0	2	1	40	60	100

Course Objectives:

1. Students will understand and perform experiments based on core chemical principles relevant to engineering applications.
2. Students will learn to estimate the hardness of water to assess its suitability for drinking purposes.
3. Students will acquire the ability to perform acid-base titrations using instrumental methods such as conductometry and potentiometry.
4. Students will gain hands-on experience in synthesizing polymers like Thiokol rubber in the laboratory.

Course Outcomes:

1. Determine water quality parameters and lubricant properties through volumetric and viscometric methods, and analyze their relevance in industrial applications.
2. Apply electrochemical techniques such as conductometry and potentiometry to estimate concentrations of acids and assess chemical reactions.
3. Examine the corrosion behavior of metals under various conditions and evaluate the effect of inhibitors on corrosion rate.
4. Illustrate the synthesis and applications of advanced materials like Thiokol rubber, fuel cells, and smart biomedical materials using real and virtual lab tools.

List of Experiments:

1. Volumetric Analysis: Estimation of Hardness of water by EDTA Complexometry method.
2. Determination of rate of corrosion of mild steel in the presence and absence of inhibitor.
3. Estimation of the concentration of strong acid by Conductometry.
4. Estimation of the concentration of strong and weak acid in an acid mixture by Conductometry.
5. Estimation of concentration of strong acid with strong base by Potentiometry using quinhydrone
6. Preparation of Thiokol rubber.
7. Estimation of acid value of given lubricant oil.
8. Estimation of viscosity of lubricant oil using Ostwald's Viscometer.
9. Construction of Fuel cell and its working. (Virtual lab)
10. Smart materials for Biomedical applications (Virtual lab)

REFERENCE BOOKS:

1. Lab manual for Engineering chemistry by B. Ramadevi and P. Aparna, S Chand Publications, New Delhi (2022)
2. Vogel's text book of practical organic chemistry 5th edition
3. Inorganic Quantitative analysis by A.I. Vogel, ELBS Publications.
4. College Practical Chemistry by V.K. Ahluwalia, Narosa Publications Ltd. New Delhi (2007).

PYTHON PROGRAMMING LAB

Department of Humanities & Sciences				I B. Tech II Semester			
Course Code	Hours/Week			Credits	Marks		
A252583	L	T	P	C	CIE	SEE	Total
	0	0	2	1	40	60	100

Course Outcomes:

At the end of the course, student will be able to:

1. Develop application-specific codes using Python.
2. Understand strings, lists, tuples, and dictionaries in Python.
3. Write programs using functions and modules.
4. Illustrate file I/O operations, and Exception Handling.
5. Apply different data visualization using Python standard libraries.

Note: The lab experiments will be like the following experiment examples.

List of Experiments

1. I. Use a web browser to go to the Python website <http://python.org>. This page contains information about Python and links to Python-related pages, and it gives you the ability to search the Python documentation.
- II. Start the Python interpreter and type `help()` to start the online help utility.
2. Start a Python interpreter and use it as a calculator.
3. Write a program to calculate compound interest when principal, rate and number of periods are given.
4. Read the name, address, email and phone number of a person through the keyboard and print the details.
5. Print the below triangle using a for loop:

```
5
44
333
2222
11111
```
6. Write a program to check whether the given input is a digit or a lowercase character or an uppercase character or a special character (use 'if-else-if' ladder).
7. Python program to print all prime numbers in a given interval (use break).
8. Write a program to convert a list and a tuple into arrays.
9. Write a program to find common values between two arrays.
10. Write a function called `palindrome` that takes a string argument and returns `True` if it is a palindrome and `False` otherwise. Remember that you can use the built-in function `len()` to check the length of a string.
11. Write a function called `is_sorted` that takes a list as a parameter and returns `True` if the list is sorted in ascending order and `False` otherwise.
12. Write a function called `has_duplicates` that takes a list and returns `True` if there is any element that appears more than once. It should not modify the original list.
13. Write a function called `remove_duplicates` that takes a list and returns a new list with only the unique elements from the original. Hint: they don't have to be in the same order.

14. The word list provided `words.txt` doesn't contain single letter words. So you might want to add "I", "a", and the empty string.
15. Write a python code to read dictionary values from the user. Construct a function to invert its content i.e., keys should be values and values should be keys.
16. Add a comma between the characters. If the given word is 'Apple', it should become 'A,p,p,l,e'
17. Remove the given word in all the places in a string ?
18. Write a function that takes a sentence as an input parameter and replaces the first letter of every word with the corresponding upper case letter and the rest of the letters in the word by corresponding letters in lowercase without using a built-in function ?
19. Write a recursive function that generates all binary strings of n-bit length.
20. Write a python program that defines a matrix and prints it.
21. Write a python program to perform multiplication of two square matrices.
22. How do you make a module? Give an example of construction of a module using different geometrical shapes and operations on them as its functions.
23. Use the structure of exception handling in all general-purpose exceptions.
24. Write a python code to read a phone number and an email id from the user and validate it for correctness.
25. Write a Python code to merge two given file contents into a third file.
26. Write a Python code to open a given file and construct a function to check for given words present in it and display if found.
27. Write a Python code to read text from a text file, find the word with the most number of occurrences.
28. Write a function that reads a file and displays the number of words, number of vowels, blank spaces, lowercase letters and uppercase letters.
29. Import numpy, Plotpy and Scipy and explore their functionalities.
30. Install NumPy package with pip and explore it.
31. Write a program to implement Digital Logic Gates-AND, OR, NOT, EX-OR.
32. Write a GUI program to create a window with two text labels, two text fields and two buttons as Submit and Reset.

TEXT BOOKS:

1. Super charged Python: Take your code to the next level, Overland
2. Learning Python, Mark Lutz, O'reilly

REFERENCE BOOKS:

1. Python Programming: A Modern Approach, Vamsi Kurama, Pearson
2. Python Programming: A Modular Approach with Graphics, Database, Mobile and Web Applications, Sheetal Taneja, Naveen Kumar, Pearson
3. Introduction to Python Programming, Gowrishankar S, Veena A, CRC Press
4. Programming with Python: A User's Book, Michael Dawson, Cengage Learning, India Edition
5. Python for Data Science, Dr. Mohd Abdul Hameed, Wiley publications
6. Core Python Programming, Dr. R. Nageswara Rao, Dream tech press
7. Introduction to Python, Gowrishankar S, Veena A, CRC Press

ENGLISH LANGUAGE AND COMMUNICATION SKILLS LAB

Department of Humanities & Sciences				I B. Tech II Semester			
Course Code	Hours/Week			Credits	Marks		
A252081	L	T	P	C	CIE	SEE	Total
	0	0	2	1	40	60	100

Course Objectives:

Listening Skills:

1. To enable students, develop their active listening skills
2. To equip students with necessary training in listening, so that they can comprehend the speech of people from different linguistic backgrounds

Speaking Skills:

3. To improve their pronunciation and neutralize accent
4. To enable students express themselves fluently and appropriately
5. To practice speaking in social and professional contexts

Course Outcomes: Students will be able to:

1. Listen actively and identify important information in spoken texts
2. Interpret the speech and infer the intention of the speaker
3. Improve their accent for intelligibility
4. Speak fluently with clarity and confidence
5. Use the language in real life situations

Exercise-I

CALL Lab:

Instruction: Speech Sounds- Listening Skill-Importance – Purpose- Types-Barriers- Active Listening

Practice: Listening to Distinguish Speech Sounds (Minimal Pairs)-*Testing Exercises*

ICS Lab:

❖ Diagnostic Test–Activity titled ‘Express Your View’

Instruction: Spoken and Written language - Formal and Informal English - Greetings - Introducing Oneself and Others

Practice: Any Ice-Breaking Activity

Exercise–II**CALL Lab:**

Instruction: Listening vs. Hearing-Barriers to Listening

Practice: Listening for General Information - Multiple Choice Questions - Listening

ICS Lab:

Instruction: Features of Good Conversation–Strategies for Effective Communication

Practice: Role Play Activity-Situational Dialogues –Expressions used in Various Situations – Making Requests and Seeking Permissions–Taking Leave- Telephone Etiquette

Exercise-III**CALL Lab:**

Instruction: Errors in Pronunciation– Tips for Neutralizing Mother Tongue Influence(MTI)

Practice: Differences between British and American Pronunciation –Listening Comprehension Exercises

ICS Lab:

Instruction: Describing Objects, Situations, Places, People and Events

Practice: Picture Description Activity– Looking at a Picture and Describing Objects, Situations, Places, People and Events

Exercise–IV CALL Lab:

Instruction: Techniques for Effective Listening

Practice: Listening for Specific Details-Listening-Gap Fill Exercises-Listening Comprehension Exercises

ICS Lab:

Instruction: How to Tell a Good Story –Story Star-Sequencing-Creativity

Practice: Activity on Telling and Retelling Stories-Collage

Exercise–V**CALL Lab:**

Instruction: Identifying the literal and implied meaning
